

閱讀課教學支援

Class Library

Grade	Reading Selection
G2	Burrowing Animals
G4	Mysterious Animals
G6	Zoo

- 結合二月動物及三月春遊書展，並配合英語教學主題，規劃「春遊動物園」佈置，展示動物資訊海報及圖書，讓老師可以利用閱讀課帶孩子們在圖書館延伸學習。

BURROWING ANIMALS

Many mammals live in burrows. Some of the most common burrowing animals found in North America include various types of mice, moles, prairie dogs, badgers and ground squirrels. Burrows not only serve as a home for these creatures, but also benefit the environment by aerating the soil. These creatures also fertilize the soil by leaving their droppings and nesting materials below ground, and encourage plant growth by depositing seeds throughout their underground tunnels. Since many of these animals are prey animals, these burrows offer some measure of protection from non-burrowing predators.

Groundhog

Fox

Mouse
